

K10

Receiving Card

Specification

Overview

K10 is a high-end receiving card developed for fine-pitch LED screens featuring large load capacity and up to 32 parallel data groups or 64 serial data groups. Due to its small form factor, K10 is best fit into concise cabinets. With high-density connectors, it can achieve dustproof and shockproof effect, result in its high stability and reliability.

K10 not only has all the functions of mainstream receiving cards, but also a series of practical and powerful features helping high-end displays to maximize video performance with stunning clarity. K10 can be perfectly used in high-end rentals as well as fine-pitch fix-installed LED screens.

Features

Display effect

- 8bit/10bit/12bit video source input.
- HDR10 and HLG.
- Full gamma independent adjustment.
- Infi-bit color extension.
- Low latency.
- Color temperature adjustment.
- Grayscale refinement.
- Better gray at low brightness.

Calibration

- Low-grayscale calibration.
- Multi-layer calibration.
- High precise per-pixel calibration in brightness and chromaticity.

Easy maintenance

- Seam correction.
- Highlight and OSD.
- Color gamut adjustment.
- Screen rotation.
- Prestore picture.
- Firmware upgrade without power restart.
- Up to 16 intelligent modules.
- Quick firmware upgrade and calibration coefficients download.
- Cabinet temperature, humidity, voltage and power monitoring.

Stable and reliable

- Loop redundancy.
- Dual receiving card hot backup.
- PSU redundancy.
- Configuration parameter redundancy.
- Calibration coefficient redundancy.
- Firmware redundancy and readback.
- Ethernet cable status monitoring.
- 7×24h uninterrupted work.

Feature details

Display effect	
12bit	Maximum 12bit color depth video input and output, it presents a grayscale 16 times the normal 8bit video source, which offers smoother screen grayscale transition.
HDR	Presenting images with high dynamic range, high contrast and wide color gamut.
High frame rate	Supports not only conventional and non-integer frame rates such as 23.98/24/29.97/30/50/59.94/60Hz, but also outputs and displays 120/144/240Hz high frame rate images, greatly improving picture smoothness and reducing smearing (This feature affects the load capacity).
14bit calibration	Supports the 14bit calibration coefficients, and real-time processing of the calibration coefficient according to the actual playback content to improve the uniformity and consistency of the screen body at different gray levels.
Multi-layer calibration	Storage and processing of multiple copies of the calibration coefficient for different brightness levels, real-time dynamic adjustment of the correction coefficients according to the actual playback content, and improve the uniformity and consistency of the screen under different gray levels.
Infi-bit	Grayscale dynamic compensation technology, it can significantly improve the grayscale of the LED screen, which is at least 64 times higher than the original level, effectively improving the details of low-gray pictures, making the grayscale transition smoother and presenting more vivid colors.
Low-grayscale calibration	The low gray level of the fine-pitch cabinet is independently calibrated, to solve the problem that such cabinet is prone to presenting low gray color bands and level unevenness with conventional calibration.
Grayscale refinement	With the use of a luminance meter, the actual screen display conditions are measured, and the screen grayscale can be accurately calibrated, which perfectly solves the gray level jitters and low gray color cast caused by the hardware.
Shortcuts	
Cabinet highlight	Mark quickly a target cabinet, by displaying a flashing rectangle indicator on the

	cabinet screen, which greatly facilitates front and rear maintenance.
Quick OSD	Mark quickly the index of a receiving card corresponding to a specific Ethernet port, allow for setting up the connection relationship of the screen easily.
Seam correction	Quickly and efficiently eliminate the perceptible bright and dark lines caused by physical screen splicing. It can be used repeatedly in rental scenarios, thanks to its advanced one-click reset feature.
Color adjustment	Allow you to quickly and easily adjust the color gamut of individual cabinet or screen. Support customized adjustment and one-click restore. Achieve high-precision color reproduction in combination with the use of the photometer.
Image rotation	Support the rotation of the cabinet image at an angle of 90°/180°/270°. Any angle rotation is also available in combination with supported LED sender models from Colorlight.
Prestore picture	Offering customizable picture display on the LED screen when there is no video signal.
Hardware monitoring	
Bit error rate detection	Quickly identify the cabinet with abnormal connection, thanks to the feature of data transmission quality detection between receiving card and LED sender.
Humidity monitoring	Monitor the cabinet (need the support from the cabinet design), and send to the computer in real-time the running cabinet humidity. With the software, users can monitor current humidity and be alerted on any abnormal condition.
Temperature monitoring	Monitor the cabinet (need the support from the cabinet design), and send to the computer in real-time the running cabinet temperature. With the software, users can monitor current temperature and be alerted on any abnormal condition.
Power supply monitoring	Support 2-way power fault monitoring of the cabinet (need the support from the cabinet design), and send to the computer in real-time the running power status. From the software, users can monitor current power status and be alerted on any abnormal condition.
Voltage monitoring	Support receiving card power voltage and 2-way cabinet power voltage monitoring (need the support from the cabinet design) in real-time. From the software, users can check corresponding voltage status.
Pixel-by-pixel monitoring	Monitoring cabinet pixel health (need the support from the cabinet design), and send to the computer in real-time each pixel status. With the software, users can check current pixels status and be alerted on the amount of bad pixels above a predefined threshold.
Fan control	Control the fan (requires support from the cabinet design) manually from the software, even allow automatic fan switching on current cabinet temperature status (requires support from the cabinet design).
LCD monitoring	Display on the cabinet LCD screen the temperature, voltage, running time and other status, support one-click self-test.
Redundancy	

Loop redundancy	The receiving card switches signal source to the other Ethernet port, when one receiving channel fail, maintaining the normal display of the LED screen.
Receiving card hot backup	Two receiving cards connect to the HUB board to control a single cabinet at the same time. When the main receiving card is abnormal, the backup card will take over the display immediately.
Firmware redundancy	Support firmware backup. Users can safely upgrade firmware without worrying about losing firmware due to cable disconnections or power failure during the upgrade process.
Configuration parameter redundancy	Provide two sets of configuration parameters in the receiving card, one of them serves as backup parameter.
Calibration coefficient redundancy	The calibration coefficient is stored both in the factory area and user area of the receiving card simultaneously. The coefficient in the user area is used by default, but users can restore the calibration coefficient from the factory area to the user area at any time.

Basic parameters

Control System Parameters	
Load Capacity	Maximum 512x512 pixels. ¹
Ethernet Port exchange	Ethernet port changeable.
Display Module Compatibility	
Supported Chips	PWM chips.
Scan Type	Up to 128 scan lines.
Module Dimension	Up to 16384 pixels per data group.
Cable Direction	Route from left to right, from right to left, from top to bottom, from bottom to top.
Data Group	32 groups of parallel RGB data and 64 groups of serial RGB data, the later can be extended to 128 groups. Data groups can be exchanged freely.
Data Fold	Horizontal or vertical 2~8 folds.
Monitoring Function (work with the module with corresponding sensor)	
Temperature Monitoring	Operating temperature range:-25°C~75°C.
Humidity Monitoring	Measuring range: 25%~95%RH.
Power Supply Monitoring	Operating power supply status, 2 monitoring ports available each card.
Voltage Monitoring	Monitoring the voltage of the cabinet power supply, 2 monitoring ports available each card. Monitor receiving card's own voltage is built-in.
Net cable Monitoring	Operating total number of packets, error packets and network quality.
Pixel-by-Pixel Calibration	
Brightness Calibration	Up to 14bit calibration accuracy.
Chromaticity Calibration	Up to 14bit calibration accuracy.
Other features	
Redundancy	Loop redundancy, receiving card redundancy, PSU redundancy, firmware redundancy, configuration parameter redundancy and calibration coefficient redundancy.
Optional functions	Cabinet LCD display, module hot swap, irregular screen design etc.

¹ The load capacity may vary on some feature enabled. Please contact Colorlight technical for support.

Hardware

Appearance

Interface

S/N	Name	Function	
1	Signal indicator	Flash once per second	Receiving card: normal. Ethernet cable connection: normal.
		Flash 10 times per second	Receiving card: normal. Cabinet: Highlight.
		Flash 4 times per second	Receiving card: working with back up channel (Loop redundancy status).
2	Power indicator	Constant red: normal.	
3	High-density connector JH1	Connect with the display's HUB or module. See below for pin definition.	
4	High-density connector JH2	Connect with the display's HUB or module. See below for pin definition.	

* K10 uses high-density connectors, please refer to the connector specification for details. The product photos in this article are for reference only.

Equipment Specifications

Physical Specifications	
Hardware interface	High-density connectors
Ethernet port transmission rate	1Gb/s
Communication Distance	Recommended: CAT5e cable≤100m
Compatible with Transmission Equipment	Gigabit switch, Gigabit fiber converter, Gigabit fiber switch

Size ²	L×W×H / 80.0mm(3.2")×45.0mm(1.8")×7.8mm(0.3")
Weight	22g / 0.051lbs
Electrical specification	
Power input	DC 3.8~5.5V, 0.8A
Rated power consumption	4.0W
ESD Resistance (HBM)	2KV
Operating environment	
Temperature	-25°C~75°C (-13°F~167°F)
Humidity	0%RH-80%RH, no condensation
Storage and transport environment	
Temperature	-40°C~125°C (-40°F~257°F)
Humidity	0%RH-90%RH, no condensation
Packing information	
Packing	Standard blister box, 4 cards per box, 400 cards per carton
Packing size	L×W×H / 550.0mm(21.9")×398.0mm(15.7")×180.0mm(7.1")
Certification	
* RoHS certification, EMC Class B certification, EMC needs to work with the cabinet design, please contact technical support for assistance.	

Reference dimensions

Unit: mm

Tolerance: ±0.3mm

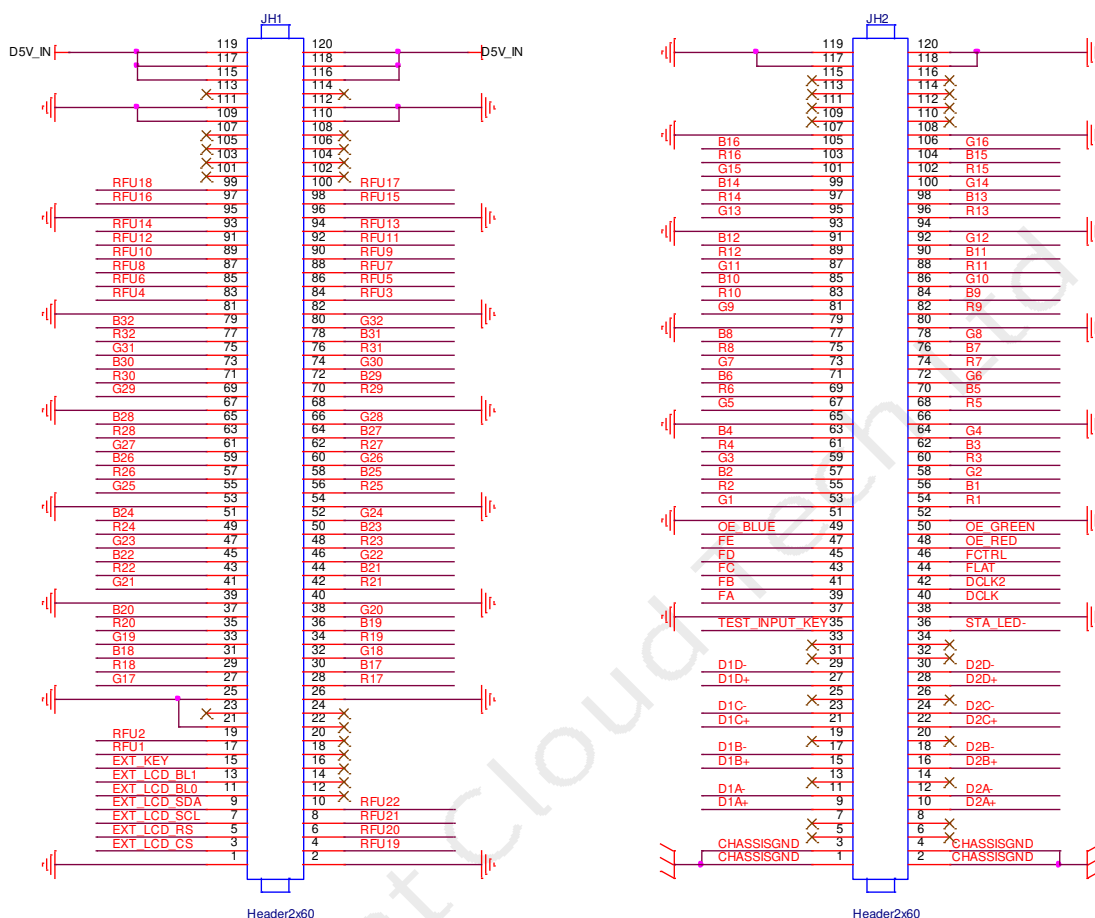

* The distance between outer surfaces of the K10 and HUB boards after their high-density connectors fit together is 5.0mm.
A 5-mm copper pillar is recommended.

² Size and weight vary by manufacturing process.
